

PUBLIC AWARENESS OF
SCIENCE AND TECHNOLOGY
IN MALAYSIA
2002

September 2003

MASTIC

MALAYSIAN SCIENCE AND TECHNOLOGY INFORMATION CENTRE
Ministry of Science, Technology and the Environment, Malaysia

From the simple to the more complex things in life, Science and Technology affect our environment and us. Natural phenomena like child growing, flowers blooming and rain falling, and man-made creations of artificial rain, sophisticated airplanes and bullet trains – all these can be understood through the study of Science and Technology. Knowledge and understanding can only be gained through careful observations, studies and investigations. Indeed, the human capacity to delve deeper in Science and Technology is boundless. The world is ever changing, beckoning us to seek greater knowledge, challenge our mind and evolve with the times.
